Firebird is a relational database offering many ANSI SQL standard features that runs on Linux, Windows, and a variety of Unix platforms. Firebird offers excellent concurrency, high performance, and powerful language support for stored procedures and triggers. It has been used in production systems, under a variety of names, since 1981.

Firebird license is free, therefore no beans to count. It is known, from reputable enterprise surveys that Firebird is chugging away on hundreds of thousands of production sites around the world. The following is a partial list of companies and organisations that are publicly known to be using Firebird:
